Oct 28-29 – Socorro Systems Summit – 2-Day Collaborative Workshop
Produced by Enchantment Chapter and New Mexico Tech

- Date: Friday/Saturday, October 28-29.
- Place: New Mexico Tech, Socorro, NM.
- Fee: \$100, students free.
- Keynote: INCOSE President-Elect Garry Roedler.
- Collaborative workshops to explore issues of interest.
- See Q3 Newsletter pages 1, 5, and 8 (16 topic descriptions).
- See flyer on Chapter website, Library tab.

Nine Top Topics on Interest Survey

- SE cultural transformation
- SE: multidiscipline enabler/art/science
- High performance teaming
- Fail-fast rapid innovation
- SoS evolutionary integrity
- Agile security
- Agile HW development infrastructure
- Organizational project-pursuit teaming
- Critical infrastructure resilience

Enchantment Chapter Monthly Meeting

10 August 2016 – 4:45-6:00 pm:

How Ready Are We to Consider Natural Systems Concepts

Larry Pohlmann, Strategics pohlmann@incose.org

Abstract: The biomimicry community would have us believe that the 'genius of Nature' is ready source of inspiration for a wide range of our engineering, design, and sustainability problems. Should the SE community accept—and act on—this belief? This presentation starts with a brief overview of the objectives, activities, and findings-to-date of the INCOSE Natural Systems Working Group (NSWG). A major premise of the NSWG is that the SE community can, and should, more routinely consider natural systems data and solution concepts. This presentation proceeds to systematically address our **readiness** to do so from seven different, but interdependent, perspectives:

- Bio-inspired design (BID) process definition acceptance and consistency—Is there sufficiency?
- Technology readiness scales and assessments—Do TRS's apply in the BID context?
- Capability maturity models—What can we learn from the maturity model advocates?
- Process and product development precedence analyses—Are NS considerations especially applicable for unprecedented functions or systems?
- Change management concepts—Will it help to use these types of techniques to encourage BID?
- Corporate and customer culture and innovation climates—Is organizational culture ready for this?
- Application scale and complexity—Do NS inspirations help in the kinds of work we do?

The presentation concludes with a set of recommendations to increase our readiness. Selected references are provided.

NOTE: This meeting will be recorded

Today's Presentation

Things to Think About

How can this be applied in your work environment?

What did you hear that will influence your thinking?

What is your take away from this presentation?

Speaker Bio

Dr. Lawrence D. Pohlmann brings the perspective of working in academia, government, and small and large business industry settings. His experience includes serving in a variety of engineering and management positions in systems engineering, software engineering, ergonomics, and business development. His domain experience includes primarily aerospace, information technology, and military systems. Doing business as *Strategics*, he continues to provide consulting support for business development efforts for several clients. He has led or participated in process improvement in several contexts. He has published extensively.

Pohlmann is a founding member of INCOSE (membership #9) and has served in several elected and appointed positions. He was the appointed one-person 'technical director and board' from 1991 to 1993 and helped to initiate and direct efforts for the first 10 working groups. He wrote the Council's first Strategic Plan in 1996.

Since January, 2013, he has focused the majority of his INCOSE efforts on participation with the Natural Systems Working Group.

***How Ready Are We to Routinely Consider
Natural Systems Data and
Solution Concepts?
— Seven Interdependent Perspectives —***

**Presentation to the INCOSE Enchantment Chapter
August 10, 2016**

**Lawrence D. Pohlmann, Ph.D.
Owner, *Strategics***

**Member/Advisor: Natural Systems Working Group (NSWG)
<https://sites.google.com/site/incosenswg/>**

Abstract

The biomimicry community would have us believe that the ‘genius of Nature’ is readily applicable to a wide range of engineering, design, and sustainability problems.

The premise of the NSWG is that the SE community can, and should, more routinely consider natural systems data and solution concepts.

This presentation: first introduces the NSWG, and then addresses our readiness to consider natural systems data and solution concepts during the SE life cycle—from seven different, but interdependent, perspectives:

- Process definition acceptance and consistency
- Technology readiness scales and assessments
- Capability maturity models
- Process and product development precedence analyses
- Change management concepts
- Corporate and customer culture and innovation climates
- Application scale and complexity

The presentation concludes with a set of recommendations to increase our readiness. Selected references are provided.

Biography

Dr. Lawrence D. Pohlmann brings the perspective of working in academia, government, and small and large business industry settings. His experience includes serving in a variety of engineering and management positions in systems engineering, software engineering, ergonomics, and business development. His domain experience includes primarily aerospace, information technology, and military systems. Doing business as *Strategics*, he continues to provide consulting support for business development efforts for several clients. He has led or participated in process improvement in several contexts. He has published extensively.

Pohlmann is a founding member of INCOSE (membership #9**) and has served in several elected and appointed positions. He was the appointed one-person 'technical director and board' from 1991 to 1993 and helped to initiate and direct efforts for the first 10 working groups. He wrote the Council's first Strategic Plan in 1996.**

Since January, 2013, he has focused the majority of his INCOSE efforts on participation with the NSWG.

Agenda

- **What Are Natural Systems (NS)?**
- **Why Should SEs Care About NS?**
- **What Is The Natural Systems Working Group (NSWG)?**
- **Why Perspectives?**
- **What Perspectives?**
- **S-o-o-o?**
- **Where Can I Learn More?**

'Natural Systems'

Anything not human-made

- **All living things: flora and fauna everywhere**
- **All non-living things**
- **Terrestrial and cosmic events**

And the interactions among these—

According to the laws of nature

***Natural Systems are the results/successes
of evolutionary experimentation***

Agenda

- **What Are Natural Systems (NS)?**
- **Why Should SEs Care About NS?**
- **What Is The Natural Systems Working Group (NSWG)?**
- **Why Perspectives?**
- **What Perspectives?**
- **S-o-o-o?**
- **Where Can I Learn More?**

Bio-inspired Design (BID)

Consciously? Or By Coincidence?

COMMERCIAL AVIATION

- Continuing bio-inspiration from birds for over 100+ years
- More than basic wing shape
- Above: level flight with 'landing gear stowed'
- Can you think of other bird-inspired aircraft structure and operations characteristics?

VELCRO® INDUSTRY

- Burrs sticking to clothes inspired new type of fastener
- Conceived in 1941
- Patented in 1950's
- World-wide, multi-million dollar industry
- Can you think of somewhere where Velcro did not work and was phased out?

BULLET TRAIN FIX

- The kingfisher bird: Inspiration for solving the 'tunnel boom' problem
- Significant engineering efforts required
- Can you identify the analogy—and why it worked?

Bio-inspired Design (BID)—2

Consciously? Or By Coincidence? **

- Things four-legged ???
[Most of our furniture]
- Things four-wheeled ???
[Most of our vehicles]
- Fork lift ???
- Fans ???
- Fire and garden hoses ???
- Siphons ???

- Fishing nets ???
- Screens ???
- Cloth ???
- Architectural concepts ???
- Suspension bridges ???
- Very high strength materials ???

- Armor ???
- Armored vehicles ???
- Military tactics ???
[E.g., Roman 'testudo'
formation]
- Riot squad tactics ???

**** Sometimes it is hard to tell which**

Nature's 'Genius'

— Nature is Very Good at a Lot of Things —

Natural
Systems
Working
Group

- An integrated, no waste system
- Operation in a wide range of environments
- High strength, low volume, low weight materials
- Locomotion in creative ways across a wide range of environments
- Diverse, extremely capable sensing
- Materials creation/recycling at low pressures, temperatures, and toxicity levels
- Energy conversion and utilization
- Real time adaptation
- Reproduction and growth
- Evolution to survive and succeed

Aren't these desirable traits for our engineered systems?

BID Successes (Examples)

- Have gone far beyond airplanes, Velcro, bullet trains
- Are numerous and diverse and increasing
 - Interface Carpet—large scale sustainability, camouflage, Lotusan—self cleaning paint, ChromaFlair—color changing paint, WhalePower turbine blades, beetle-inspired water collection, the “termite building,” Sharklet Technologies—bacteria transfer avoidance, bendable glass, Fibonacci spiral inspired pump and fan blades, Evocative—mushroom inspired, custom grown, bio-degradable packaging materials
- Are easily located online
 - Search on ‘biomimicry successes’

Doesn't the number and diversity of BID successes provide a foundation for routine NS consideration?

Predictions by Brilliant People

“We’re going to see in surprisingly short order that biological inspiration and biological processes will become central to engineering real systems. It’s going to lead to a new era in engineering.”

Charles M. Vest (1941-2013), former President of MIT (2009)

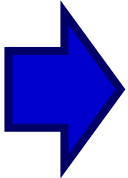

“I think the biggest innovation of the twenty-first century will be the intersection of biology and technology. A new era is beginning, just like the digital one”

Steve Jobs (1955-2011), former Apple CEO (2011)

Is routine consideration of NS inevitable?

Agenda

- **What Are Natural Systems (NS)?**
- **Why Should SEs Care About NS?**
- ▪ **What Is The Natural Systems Working Group (NSWG)?**
- **Why Perspectives?**
- **What Perspectives?**
- **S-o-o-o?**
- **Where Can I Learn More?**

Natural Systems Working Group

Natural
Systems
Working
Group

NSWG Goal: Influence SE processes to routinely and appropriately consider natural systems solution concepts and data throughout the SE life cycle. Help SE teams learn how to ask:

“What would nature do?”

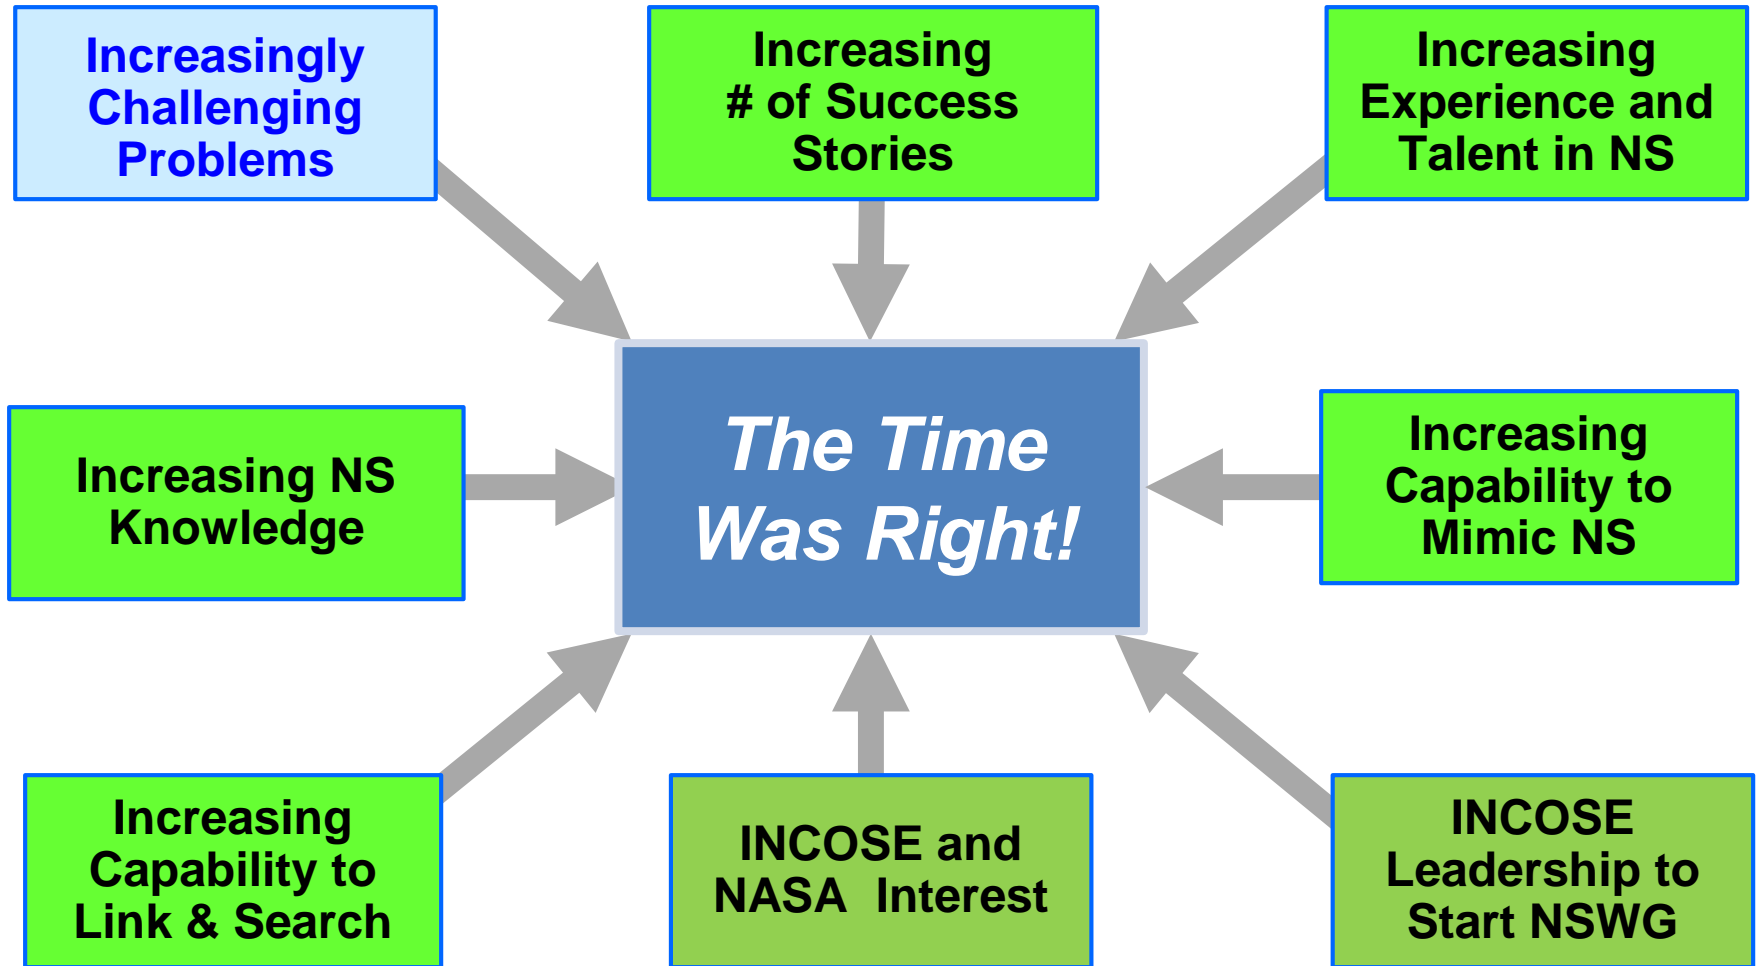

Recent/Current Special Initiatives:

- 1. INSIGHT Special Feature on Natural Systems (April 2016)**
- 2. SEBoK article on ‘good/best’ practices for considering NS as part of SE processes**
- 3. Article on Reference Architectures related to NS**

**[https://sites.google.com/site/incosenswg/
nswg-info@incose.org](https://sites.google.com/site/incosenswg/nswg-info@incose.org)**

Come and Join Us !!

Started January 2013 —The Time Was Right!—

NSWG Activities: Webinars (Sample Below), Weekly Meetings, Initiatives

- “Systematic Design of Biologically Inspired Engineering Solutions.” Jacquelyn K.S. Nagel. James Madison University—Webinar 2015-3. A process examination example.
- “Jellyfish Node and Colonies: Modeling Biological Structure and Behavior, System Architecture Design and Implementation.” Shashank Priya et al. Virginia Polytechnic Institute and State University—Webinar 2014-4. A robotics research example.
- “Gecko-grippers for space – from the animal to Zero-g Flight Test.” Aaron Parness. NASA Jet Propulsion Laboratory—Webinar 2014-7. A NASA research project example.
- “WYSS Institute for Biologically Inspired Engineering.” Mary Tolikas, Harvard University—Webinar 2013-4. A BID business incubator example.

- “The AskNature Website and The Biomimicry Taxonomy.” Ethan Smith, The Biomimicry Institute—Webinar 2015-8. A tools example.
- “Compound Eyes—They Might Not Do What You Think.” Jerome B. Franck. US Army Night Vision & Electronic Sensors Directorate—Webinar 2015-1. A sensor study and modeling example.
- “Natural Inspiration for Unnatural Characters in Creative Cinema.” Phil Tippett. Tippett Studio—Webinar 2015-6. An entertainment industry use of BID example.
- “Georgia Tech’s Center for Biologically Inspired Design.” Jeannette Yen. Georgia Tech University—Presentation at International Workshop 2015. A BID interdisciplinary training and research program example.

The NSWG has sponsored a wide range of NS-related webinars. See the NSWG site for list, slides, recordings

FUNCTIONING ENTERPRISE	e.g DATA	e.g FUNCTION	e.g NETWORK	e.g ORGANISATION	e.g SCHEDULE	e.g STRATEGY

Another famous multiple perspectives example

Is there an SE/NS equivalent?

Agenda

- **What Are Natural Systems (NS)?**
- **Why Should SEs Care About NS?**
- **What Is The Natural Systems Working Group (NSWG)?**
- **Why Perspectives?**
- **What Perspectives?**
- **S-o-o-o?**
- **Where Can I Learn More?**

Interdependent Perspectives— To Help Assess NS Consideration Readiness

1. Process definition acceptance and consistency
2. Technology readiness scales and assessments
3. Capability maturity models
4. Process and product development precedence analyses
5. Change management concepts
6. Corporate and customer culture and innovation climates
7. Application scale and complexity

These seven perspectives can help us examine the 'reality' of our readiness for routine NS consideration

1. Process Definition Acceptance and Consistency

- What is the BID process?
- How much agreement is there on this?

*"Let me get this straight. You want to build a new discipline of biologically inspired design (BID) — but your terminology and processes are inconsistent, and there are few experts, and few communities of practice, and little theory or methodology, and no scientific discipline! And you want me to help you??**
Good Grief!!!"*

**Adapted from Goel, NSWG webinar, December 2013

***There is terminology and
process definition work to do!
It will take a while!!
Five years? 10? More?
How much consistency do we need?***

2. Technology Readiness Level Scales and Assessments

US Department of Energy Technology Readiness Levels***

- TRL9—Actual system operated over the full range of expected mission conditions
- TRL8—Actual system completed and qualified through test and demonstration
- TRL7—Full-scale, similar (prototypical) system demonstrated in relevant environment
- TRL6—Engineering/pilot-scale (prototypical) system validation in relevant environment
- TRL5—Laboratory scale, similar system validation in relevant environment
- TRL4—Component and/or system validation in laboratory environment
- TRL3—Analytical and experimental critical function and/or characteristic proof of concept
- TRL2—Technology concept and/or application formulated
- TRL1—Basic principles observed and reported

***Publication DOE G 413.3-4A

Wikipedia discusses multiple Technology Readiness Level (TRL) scales—i.e., NASA, DoD, DOE, the European Space Agency, and the Oil and Gas industry

https://en.wikipedia.org/wiki/Technology_readiness_level

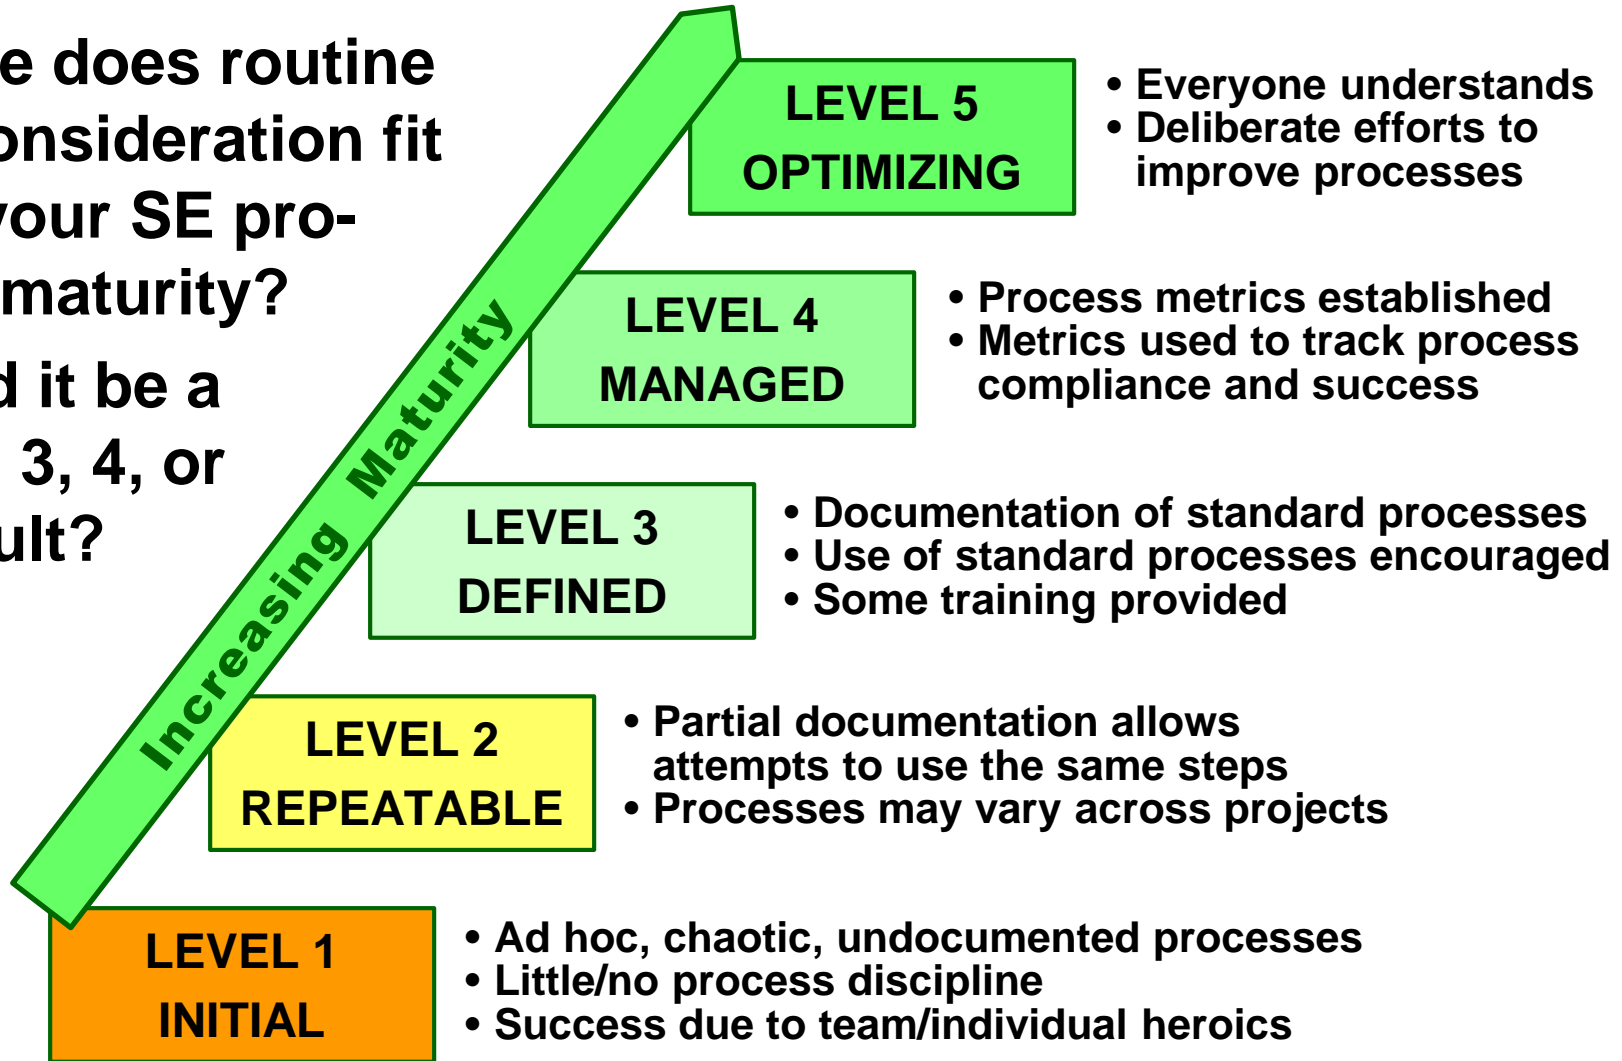

- Powered flight experiments
- Self driving car experiments

Discussing BID approaches using TRL terminology may make them more credible with the SE community

3. Capability Maturity Models

[https://en.wikipedia.org/wiki/Capability_Maturity_Model#CMMI]

- Where does routine NS consideration fit into your SE process maturity?
- Could it be a Level 3, 4, or 5 result?

4. Process and Product Development Precedence Analyses

Precedence = the fact of preceding in time, antedating

- Has anyone done this before?
- Has our company done this before?
- Has our project team done this before?
- Which concepts/systems/subsystems are new?
- Is there expertise that we can access?
- Has our customer specified/acquired/used these types of products/systems before?

***“Precedence” may apply to domain, tools, process—
as well as system, application, or design***

Precedents reduce ‘cognitive distance’ to a goal

5. Change Management Concepts

Moving to routine consideration of NS is a change — and can/should be handled with change management methods: e.g., via Kotter's eight stage process**

Establishing a Sense of Urgency

Creating the Guiding Coalition

Developing a Vision and Strategy

Communicating the Change Vision

Empowering Employees for Broad-Based Action

Generating Short-Term Wins

Consolidating Gains and Producing More Change

Anchoring New Approaches in the Culture

Key!
Needs
lots of
time and
effort!!

**Kotter, *Leading Change*, Harvard Business School Press, 1996
See also Prosci.com (for free stuff), or 'Change Management' in Wikipedia

6. Corporate and Customer Culture and Innovation Climates

*Leading Edge
Innovator*

Entrepreneur?

Hesitator

Proven
Technology
User

Explorer

Visionary

Risk Taker

Willing
Collaborator

Thorough
Planner

Conservative
Investor

First
Mover

Integrator

Strong
Process
Improvement
Advocate

Aggressive
R&D Sponsor

Some characteristics facilitate moving toward routine NS consideration—while others tend to be barriers

7. Application Scale and Complexity

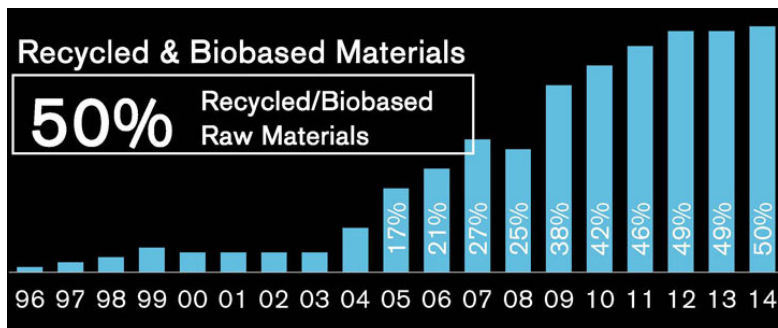

Velcro (Curiosity → Quick inspiration)

- Opportunity driven: Why do burrs stick to my clothes?
- Small scale, narrow focus (Common to many BID successes)
- Nearly immediate solution vision
- Long, complex materials engineering problem ~10 years
- 50+ years old, has now achieved diverse, world-wide usage

Shinkansen (Japanese bullet train) (An excellent example!)

- Requirement driven: tunnel boom and vibration problems
- Larger scale problem with multiple situation dimensions
- Extended search for solution, multiple trade studies
- Recognized as situation of dealing with pressure change
- Simulated solution concepts in laboratory

Interface Carpet (High Complexity)

- Vision driven: total sustainability
- Very large and complex *challenge*
- Long term, incremental goals (25+ yrs)
- World-wide company participation
- Wide range of bio-inspirations
- Entire company is NS sensitive

There is wide spectrum of scale and complexity — and spectrum position drives NS consideration approaches

Interface Carpet's Mission Ø —

Zero Impact, Total Sustainability by 2020

[www.interfaceglobal.com/sustainability/interface-story.aspx]

Natural
Systems
Working
Group

- **Front 1 – Eliminate Waste:**
 - Eliminate all forms of waste in every area of business.
- **Front 2 – Allow Only Benign Emissions:**
 - Eliminate toxic substances from products, vehicles, and facilities.
- **Front 3 – Renewable Energy:**
 - Operate facilities with 100% renewable energy.
- **Front 4 – Close The Loop:**
 - Redesign processes and products to close the technical loop using recovered and bio-based materials.
- **Front 5 – Use Resource Efficient Transportation:**
 - Transport people and products efficiently to eliminate waste and emissions.
- **Front 6 – Sensitize Stakeholders:**
 - Create a culture that uses sustainability principles to improve the lives and livelihoods of all of our stakeholders.
- **Front 7 – Redesign Commerce:**
 - Create a new business model that demonstrates and supports the value of sustainability-based commerce.

Interface Carpet is a good example of a visionary, coordinated, long-term, multiple front, corporate-wide BID effort

Agenda

- **What Are Natural Systems (NS)?**
- **Why Should SEs Care About NS?**
- **What Is The Natural Systems Working Group (NSWG)?**
- **Why Perspectives?**
- **What Perspectives?**
- **S-o-o-o?**
- **Where Can I Learn More?**

So: Are We Ready?

— Point and Counterpoint —

Yes, We Are!

- ✓ There are numerous, diverse BID successes
- ✓ SEs are capable of working across disciplines
- ✓ SEs are capable of integrating in new technologies
- ✓ SE community is willing, able to adapt, improve processes
- ✓ BID acceptance is spreading
- ✓ NS/BID data, advocacy, R&D, and training are expanding
- ✓ Advances in computational capability, miniaturization, and materials science make real considerations feasible

No, Not Yet!

- ✗ BID successes tend to be small—and mostly irrelevant to the SE community
- ✗ BID is still largely an academic vs. practical discipline
- ✗ BID as a process remains too ill-defined for routine use
- ✗ BID is in the hype phase, it is not clear that it will succeed on 'SE scale' problems
- ✗ Most large companies have too much inertia and not enough \$\$\$ to seriously and routinely consider embracing BID at this time

All of these statements are 'defendable'

Pohlmann's SE/NS Manifesto

- We have complex, hard problems to solve
- Nature has a wide range of elegant solutions
- Some of nature's solutions may be applicable
- There are BID success stories we can learn from
- SE processes can grow to appropriately and routinely consider concepts/data from nature
- Increasing computational, materials sciences, and miniaturization capabilities are enablers

It starts with the appropriate and timely interdisciplinary communications

Recommendations

- **Accept as inevitable that routine consideration of NS will grow over time**
- **So Go For It! Use the perspectives to shape your adoption approach and priorities**
- **Sell the vision! But be cautious of the dangers of ‘irrational exuberance’**
- **Pohlmann’s position: Build expertise, then begin routine consideration—judiciously!**
By system/product, select one of three options—
 - **NS not relevant → look no further at this time**
 - **NS may be relevant → do more trade studies**
 - **NS is relevant → dig deep, shape, use wisely**

Agenda
